

# Andrew Burke

Web App Developer

## ABOUT ME

I began developing web apps for both productivity and fun, but now I am interested in continuing to develop my skills at a professional level. I love to create interactive and useful tools that people can use to streamline their professional and personal lives.

## PROJECTS

### Colorway Helper App — *made with React*

Choosing color schemes that mesh is often a challenge for me. So, using The Color API, I've created a colorway helper. Choose a starting color, and this tool will output other colors that will work together in tandem to create an appealing color scheme.

### CompSci Trivia App — *made with React*

Simply a fun app to test your CompSci trivia knowledge using Open Trivia API. I like to see how many questions I can answer until I get one wrong. Would you like to test yourself?
